Polatis ships 1000th all-optical network switch based on its DirectLight technology

Announced Date: 3/8/2011 Published Date: 3/8/2011

Polatis, a developer and manufacturer of all-optical switching solutions, has announced production of the one-thousandth optical matrix switch based on its patented DirectLight technology.

In use by more than 100 customers around the world, Polatis optical switches have accumulated hundreds of millions of port-hours with deployments in diverse applications for remote fibre layer provisioning, protection, monitoring, reconfiguration and test.

Polatis CTO, Nick Parsons, said, "Polatis is favoured in applications requiring rapid, transparent, fibre layer reconfiguration with minimal impact on network performance. But additionally, customers across many markets recognise the strong return on investment that's possible using all-optical switching".
